# 5100 Series **Green Door**

*"The door that pays for itself"*

record-usa recognizes the importance of the Green initiative.

Disposing of items that could be recycled diminishes energy, water and natural resources that could be saved by recycling. Creating an environment of cultural responsibility has been a focus of ours over the past several years and will remain as such for the foreseeable future.

## Energy Consumption of record-usa 5100 Series sliding door systems:

The Standby load has been tested at 25 watt. This is when the door is closed at rest and set on automatic mode, with other peripherals connected such as sensors, locking, etc. The maximum loading (continuously in full operation) has been tested at 100 watt, most leading competitor's average from 250 W to 600 W. This is when the door is under permanent and maximum operation combined with the maximum door leaf weight of 225 pounds per panel. With the motor voltage at 35VDC, the operator is classified as Class II.

## Exclusive Traffic Sensitive "Smart" opening logic reduces air infiltration.

When low traffic is sensed the door operates to a selectable reduced opening. When two-way and/or higher volume is sensed, the door operates at full opening width.

By automatically changing the opening and closing width based on pedestrian traffic flow record reduces air loss out of the building.

## Construction Waste Management

Product manufactured by record-usa ships in recycled cardboard that is suited for further recycling or for possible reuse when required. We never use hard to dispose of styrofoam like other manufacturers. This eliminates or greatly reduces extensive re-usable garbage/material being delivered to and or buried in public disposal areas.

## Warranty

record's two (2) year warranty is double the industry standard. Also, record proudly offers a life-time warranty on our track system and a three year warranty on our roller system. Extended warranties not only exude confidence in the durability and lasting ability of our sliding door system but lead to reduced part replacement and better operating conditions, saving further on both energy consumption and possible refuse items.

- Electronics allow for both low wattage consumption and energy efficiency
- Traffic Sensitive Sensor provides controlled and timed opening and closing cycles
- 1" glazing offers protection from the elements and reduces hot/cold transfer from interior and or exterior
- Rubber seals between panels and extended bottom door sweeps reduce and eliminate air and smoke infiltration
- Door closers assure panel coming closed after breakout reducing loss of building heat or col

## Door Panels

Ultrafab's patented process weilds a single fin and pile fibers into a totally integrated product

- To conserve building energy losses, the door panels utilize flexible seals around the full perimeter
- The longer door seals include a soft non-woven fabric fin to assure a tight seal and barrier against air and water infiltration
- The standard floor seal provides a nylon brush to accommodate varying floor conditions, with an optional flexible membrane insert to eliminate unwanted pests
