recordsafe Anti-Microbial Coating

record offers a durable, transparent coating which can be applied to virtually any surface killing bacteria, fungus, molds and algae-proving a protective barrier between you and the surfaces you interact with daily, including door handles, door panels, door pulls and latching mechanisms.

Durable

Applied directly to surfaces it creates a durable, positively charged, molecular bond with the surface that will not wear off or be absorbed by other organisms.

Positively Charged

Positively charged anti-microbial coating attracts the negatively charged microbes, which are then destroyed. This interaction is mechanical & physical, not chemical.

Green Alternative

An environmentally friendly anti-microbial choice. There are no toxins to bleed into the environment and will not lead to the generation of adaptive organisms.

Why choose recordsafe?

recordsafe is designed to reduce the occurrence of an exposure to microbes of all types. recordsafe is extremely effective against mold and harmful bacteria. Unlike other treatment systems, recordsafe is nearly invisible and doesn't discolor the surface it is applied to. When manual doors are a necessity and sliding doors are not possible, recordsafe applied to ICU doors offers environmentally friendly protection. Used in tandem with the record Freedom Series door operators, record leads the way for your touchless concerns.
