Retrofit Kit for Sliding Doors (Stanley 2000 Series)

In many instances electronics and common wear items on competitive door systems fail well before the aesthetic appeal of the door has faded or worn. In times like this turn to record-usa. Our recordfit kit replaces the interior components that operate the door system quickly, efficiently and at a significantly lower cost than having to replace the entire door system would entail. Best estimates state that the life expectancy of an automatic door is anywhere from seven (7) to twelve (12) years- the recordfit can add to that by an additional seven to twelve years.

- Comes complete with the exclusive and cost saving record SMART Panel
- When installed by our factory trained technicians your door will still comply with all applicable ANSI standards for safety
- Saves Significant cost in replacing doors and headers that might otherwise be in fine shape
- Same silent operation and durability as the 5100 series
- Accordingly, saves the end user labor costs as estimated replacement time is less than half of that of an entire door
- Can be integrated with existing ANSI compliant sensors
- BEA, OPTEX, RIC290 sensor available at added cost
- Always in inventory and carried on our factory trucks - why wait 6-8 weeks for a new door from our competitor
- Eliminates repeated service calls on older door systems when all you are doing by calling a repair technician is providing an expensive short term fix
- The quick fix, low cost alternate when parts simply are not available for older door units
- Advantageous when that custom designed door or specially finished entranceway fails but still looks beautiful
- Industry best two year warranty
- Optional electric locking and battery back up to allow for continuous usage in the event of power failure
- Belts available up to 14' standard (larger doors upon request)
- Dual mount option available
- 500 pounds of combined panel weight possible
- Bi-parting packages up to 14 foot wide
- Compatible with record and Optex safety beams only

Panel

- The 5100 introduces a new control panel with an intuitive interface and visual feedback of door status. Selecting the operational mode of the door is a single button press, and the built-in display will provide confirmation.
- The control panel can be manually locked, preventing unauthorized alteration by those who do not have permission to adjust the door.
- Two control panels can be installed on the same door; one at the unit and one remote.
- The control panel will automatically provide an alert message if an abnormal condition occurs.
- Provides user with the phone number of the authorized service agent.
- Reminds you of your commitment in performing a daily safety check.
- Provides information regarding objects in track that may negatively impact the operation of the door.
- Displays current door setting in regard to traffic selection and egress.
- Indicates when a door has been accidentally broken out.
- Identifies if a safety beam has failed or been damaged.
- Notifies user of which part needs replacement due to failure or abuse.
